

ML for better maps

Panel - Computer Vision and Machine Learning: from cat videos to cat modeling

Geospatial data for decision making

Completeness matters

Accuracy matters

Accuracy matters

How does ML help?

It supports creators of map data (eg. OSM) to:

- Map faster and more accurately; and
- Keep the map up to date as the world around us changes

Concepts

Classification

CAT

Classification + Localization

CAT

Object Detection

CAT, DOG, DUCK

Instance Segmentation

CAT, DOG, DUCK

Single object

Multiple objects

Urban = Yes

ML for mapping

Supercharging human mappers

- Target attention
- Direct mappers to the right areas
- Do the boring stuff
- Help people work faster

Sample results from Liberia – (1) yellow pixels represent the testing tiles, (2) blue pixels represent school locations, (3) pink pixels represent test tiles predicted as schools that correspond to actual school locations (true positives), (4) orange tiles represent test tiles predicted as schools that don't correspond to actual school locations (false positives).

Getting ML right

Open Machine Learning

- Open models
- Open training data
- Open toolkits - eg. [Label Maker](#)
- Open methodologies and processes - eg. [HV grid report](#)

Geodiversity

[...] examining the geo-diversity of open data sets is critical before adopting a data set for use cases in the developing world.

[No Classification without Representation: Assessing Geodiversity Issues in Open Data Sets for the Developing World](#) - Google Brain Team
